

Visualization Playbook

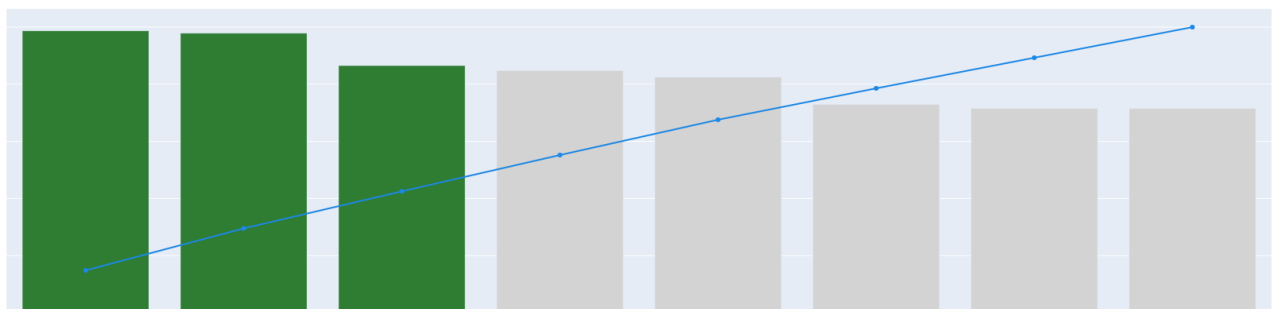

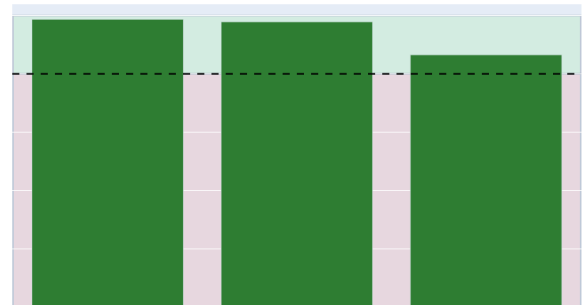

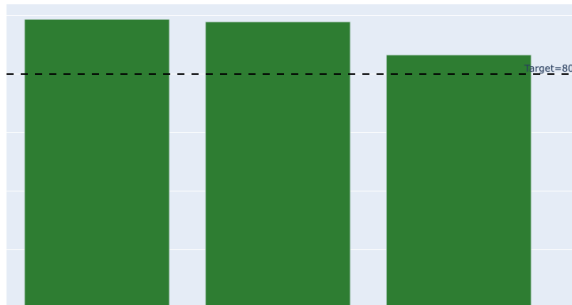

Good / Bad / Important Context Edition

Color Legend:

- Green: Good practices and positive patterns
- Red: Bad practices and negative patterns
- Gold: Important/neutral patterns requiring attention
- Blue: Neutral accents and reference lines

Each visualization category is presented in three focused views, showing only patterns matching the current focus. Context is provided through colors, annotations, and notes rather than axis labels.

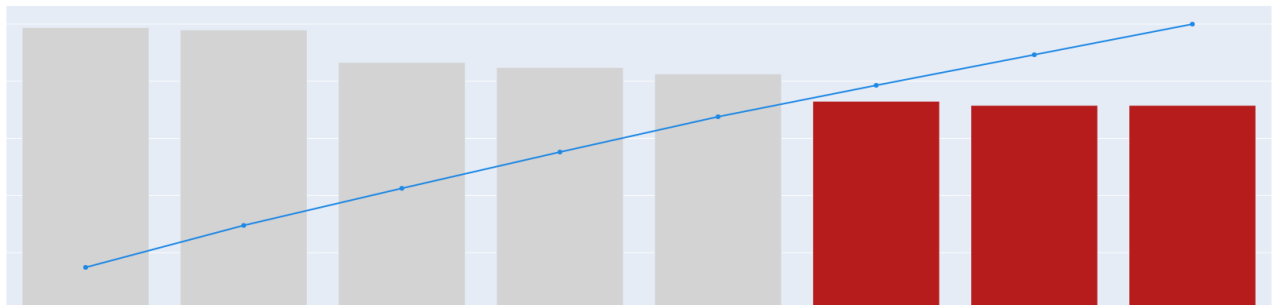

Categorical Data - Good Focus

Notes:

This page spotlights good patterns only. Best: bar, grouped, Pareto; Use: compare categories, 80/20; Pitfalls: too many cats, truncated axes, color overload.

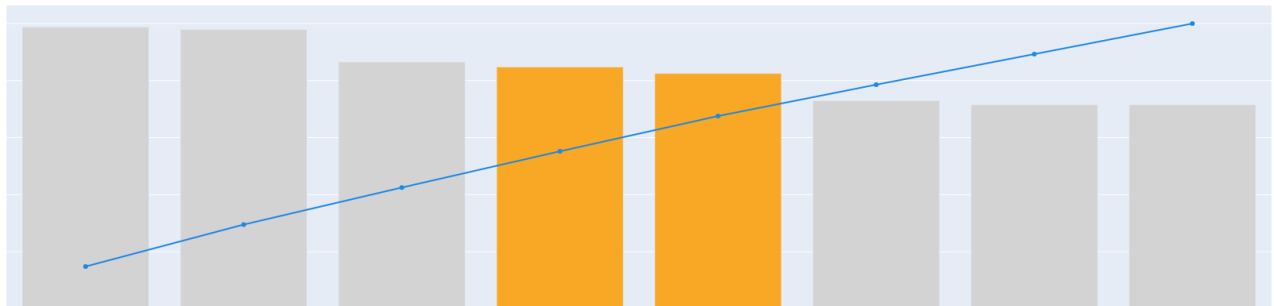

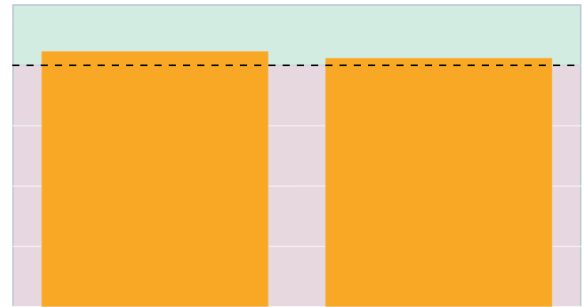

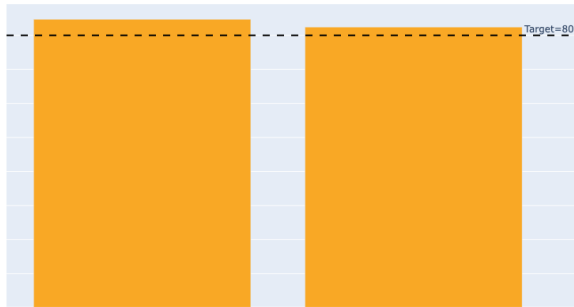

Categorical Data - Bad Focus

Notes:

This page spotlights bad patterns only. Best: bar, grouped, Pareto; Use: compare categories, 80/20; Pitfalls: too many cats, truncated axes, color overload.

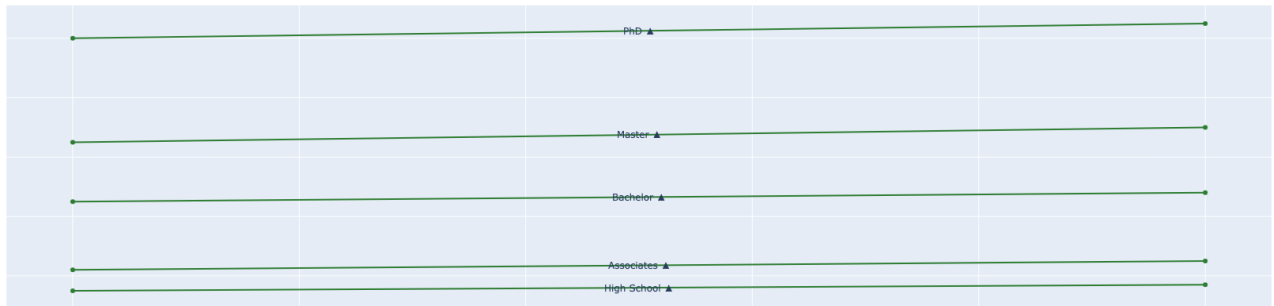

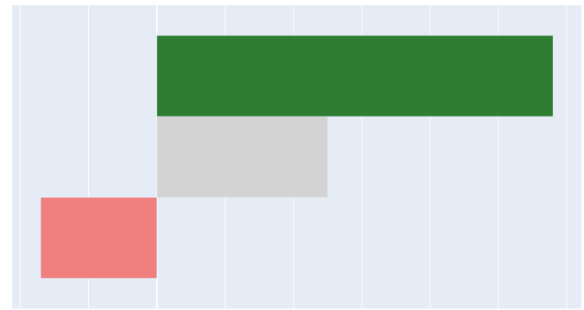

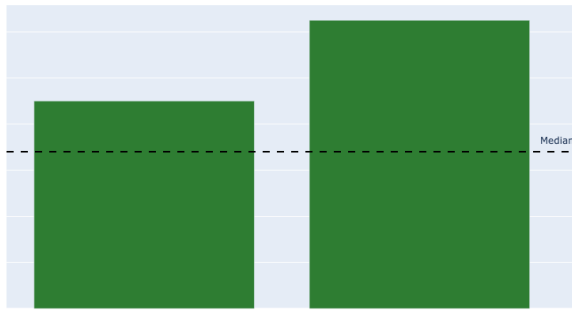

Categorical Data - Important Focus

Notes:

This page spotlights important patterns only. Best: bar, grouped, Pareto; Use: compare categories, 80/20; Pitfalls: too many cats, truncated axes, color overload.

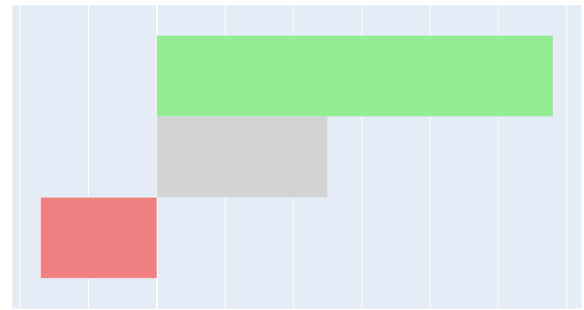

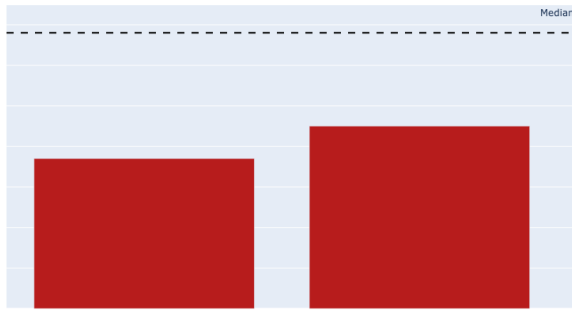

Ordinal Data - Good Focus

Notes:

This page spotlights good patterns only. Best: ordered bars, diverging Likert, slope; Use: survey scales, rank order, two-point change; Pitfalls: wrong order, clutter, labels.

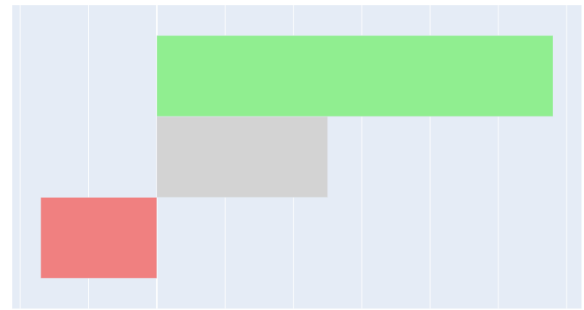

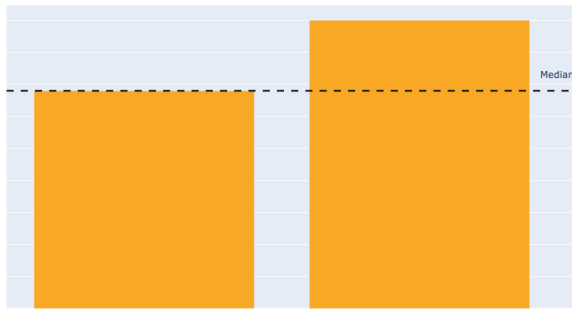

Ordinal Data - Bad Focus

Notes:

This page spotlights bad patterns only. Best: ordered bars, diverging Likert, slope; Use: survey scales, rank order, two-point change; Pitfalls: wrong order, clutter, labels.

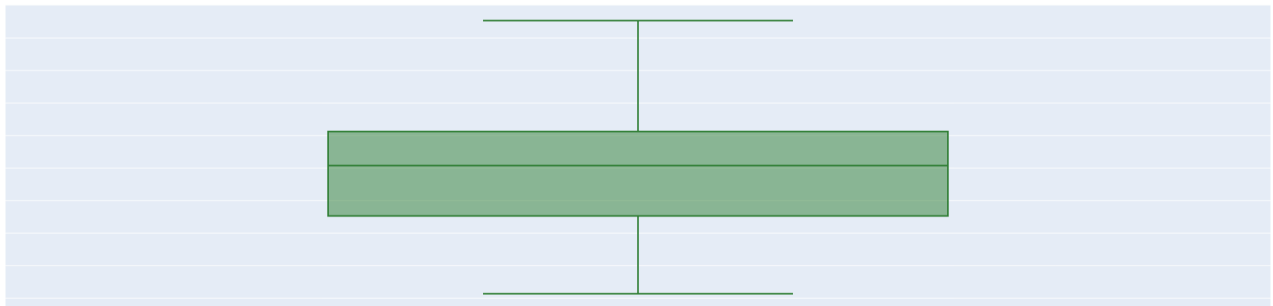

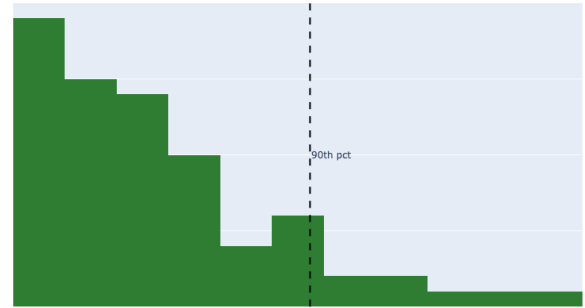

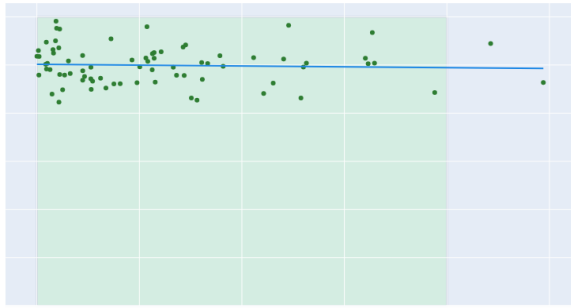

Ordinal Data - Important Focus

Notes:

This page spotlights important patterns only. Best: ordered bars, diverging Likert, slope; Use: survey scales, rank order, two-point change; Pitfalls: wrong order, clutter, labels.

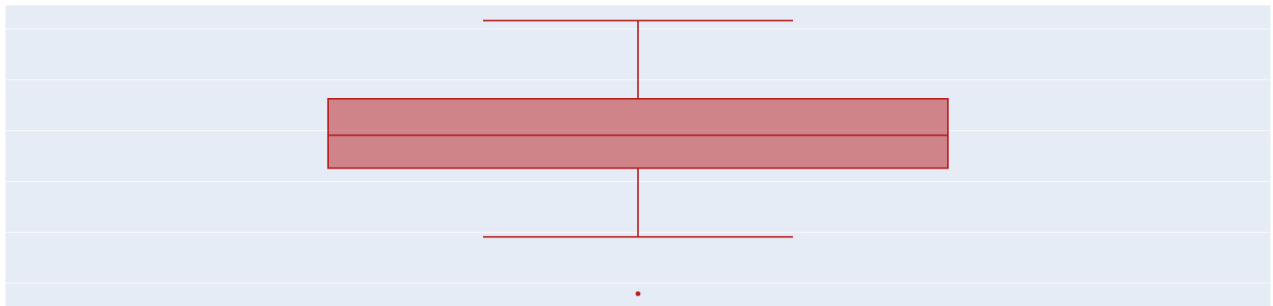

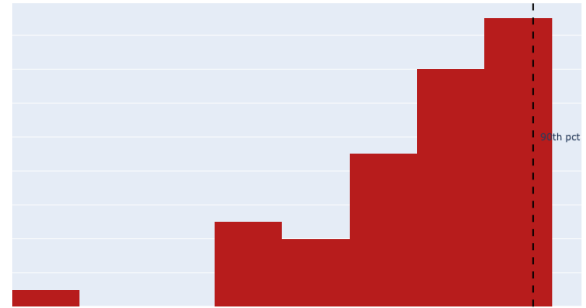

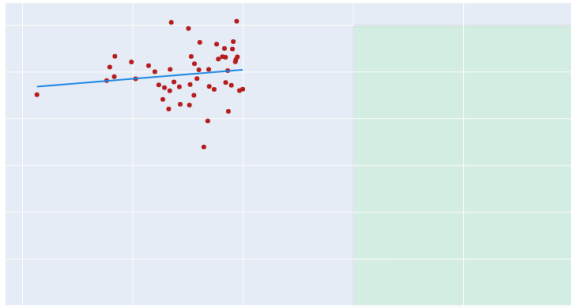

Quantitative Data - Good Focus

Notes:

This page spotlights good patterns only. Best: scatter + fit, histogram, boxplot; Use: correlation, distribution, outliers; Pitfalls: bad bins, overplotting, unlabeled axes.

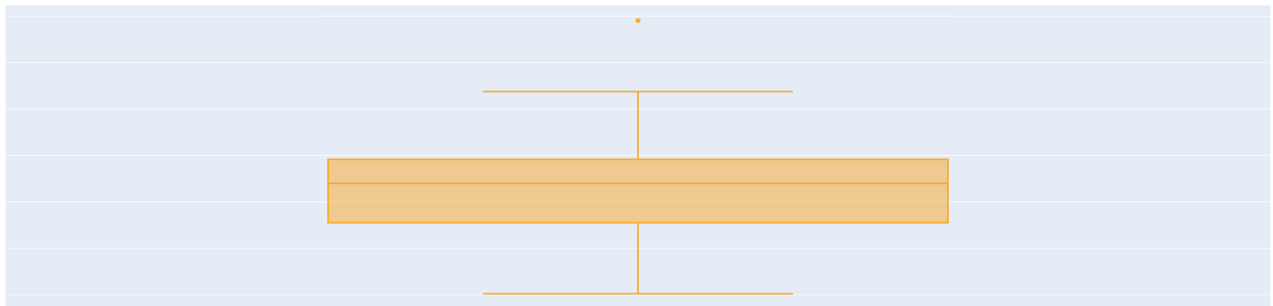

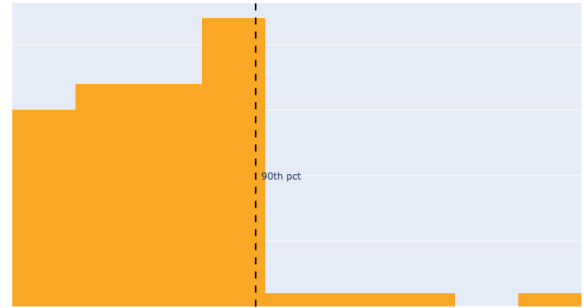

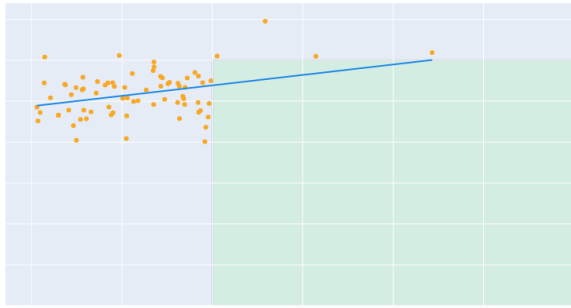

Quantitative Data - Bad Focus

Notes:

This page spotlights bad patterns only. Best: scatter + fit, histogram, boxplot; Use: correlation, distribution, outliers; Pitfalls: bad bins, overplotting, unlabeled axes.

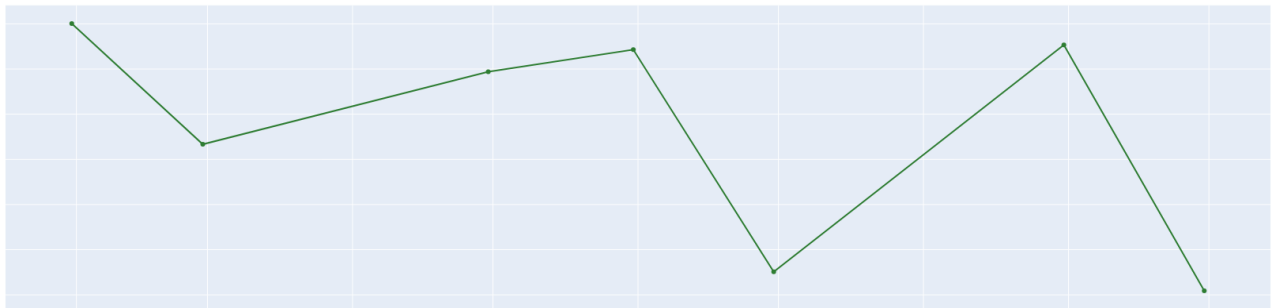

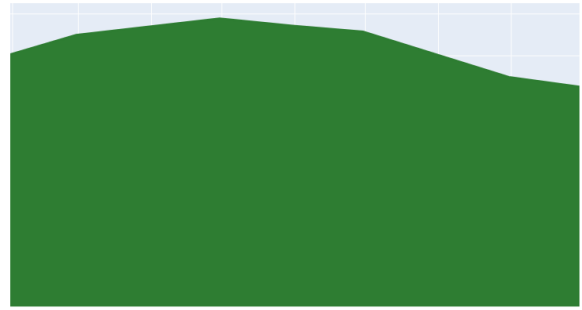

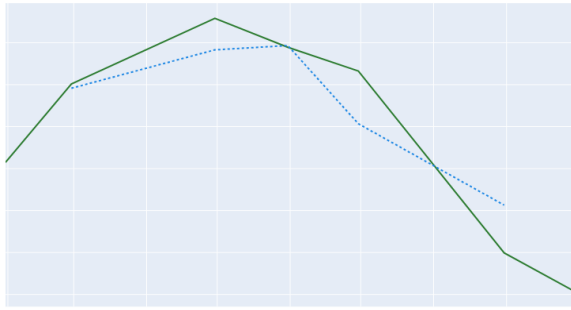

Quantitative Data - Important Focus

Notes:

This page spotlights important patterns only. Best: scatter + fit, histogram, boxplot; Use: correlation, distribution, outliers; Pitfalls: bad bins, overplotting, unlabeled axes.

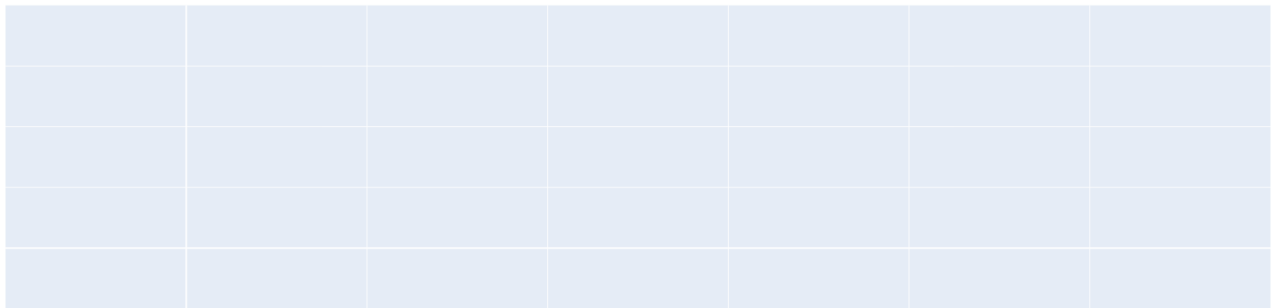

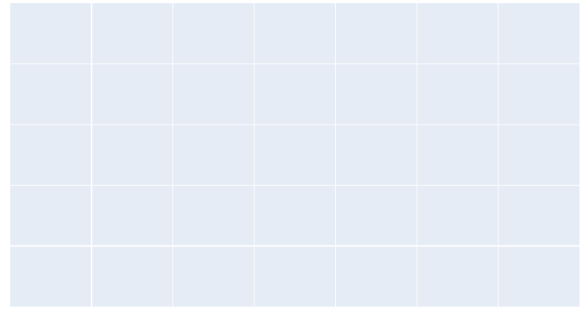

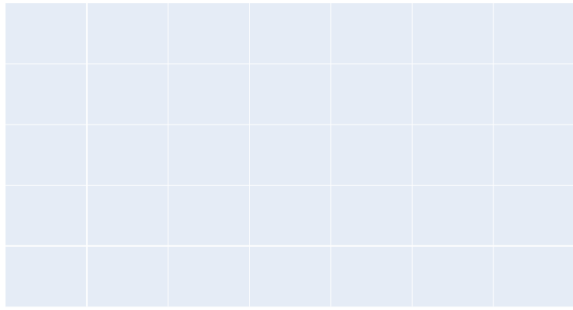

Temporal Data - Good Focus

Notes:

This page spotlights good patterns only. Best: line + MA, YoY%, events, seasonal area; Use: trends, seasonality; Pitfalls: bars for continuous, uneven intervals.

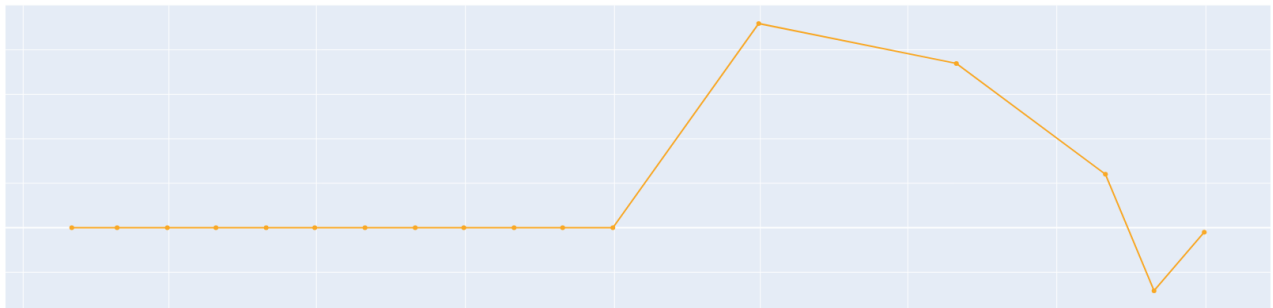

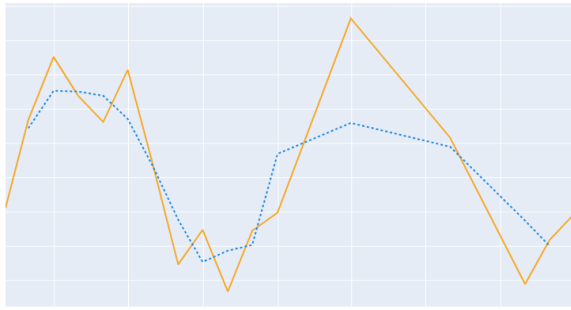

Temporal Data - Bad Focus

Notes:

This page spotlights bad patterns only. Best: line + MA, YoY%, events, seasonal area; Use: trends, seasonality; Pitfalls: bars for continuous, uneven intervals.

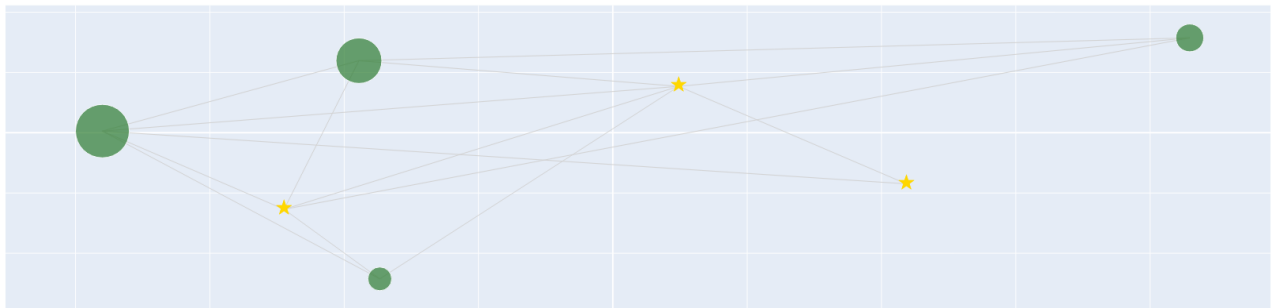

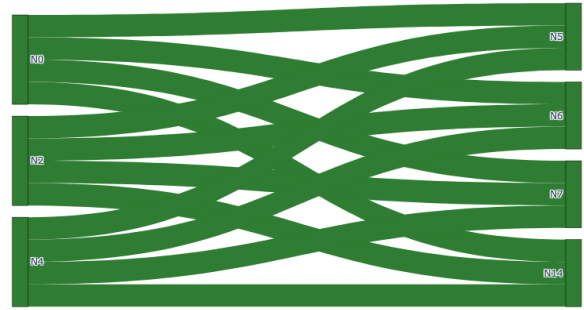

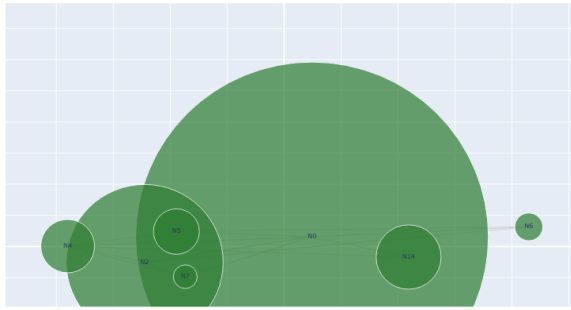

Temporal Data - Important Focus

Notes:

This page spotlights important patterns only. Best: line + MA, YoY%, events, seasonal area;
 Use: trends, seasonality; Pitfalls: bars for continuous, uneven intervals.

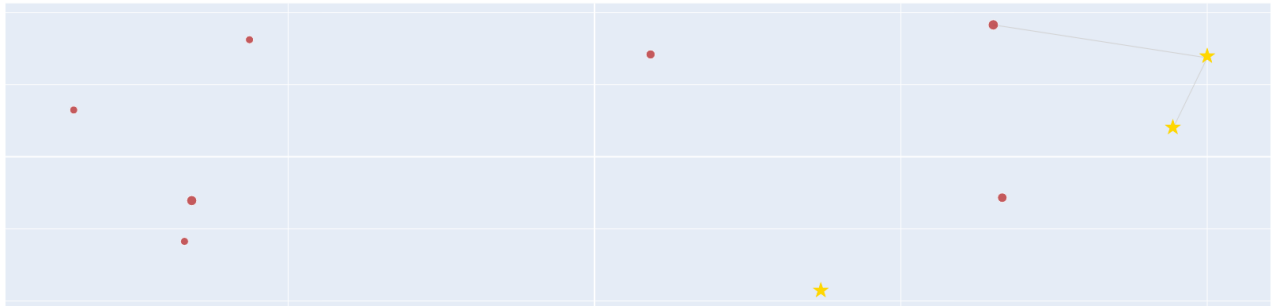

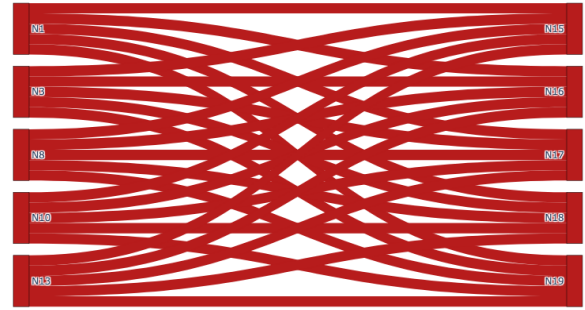

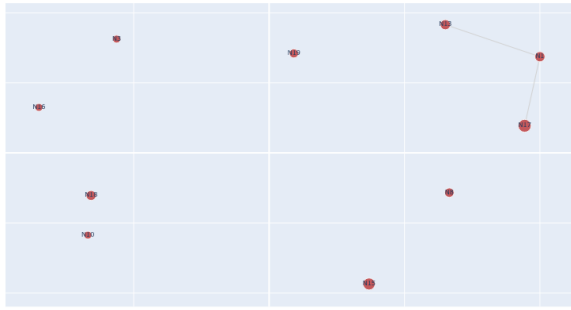

Relational Data - Good Focus

Notes:

This page spotlights good patterns only. Best: node-link + centrality, Sankey (%); Use: networks, flows, bottlenecks; Pitfalls: hairball—filter/highlight.

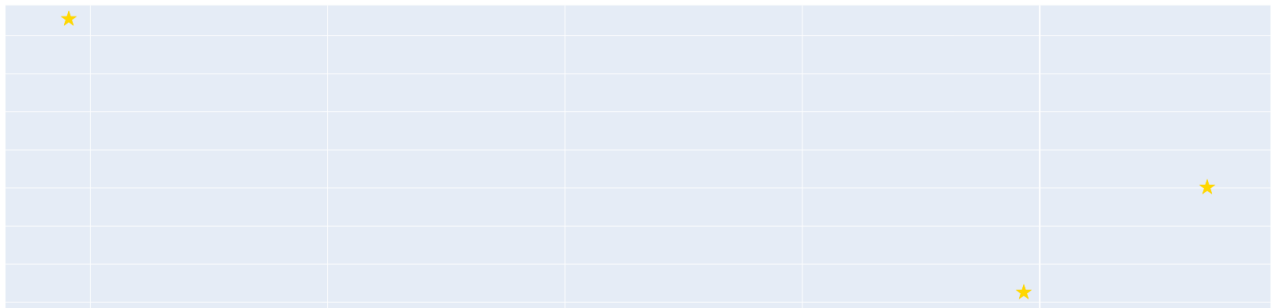

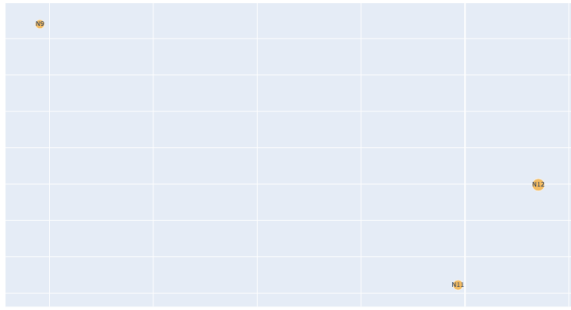

Relational Data - Bad Focus

Notes:

This page spotlights bad patterns only. Best: node-link + centrality, Sankey (%); Use: networks, flows, bottlenecks; Pitfalls: hairball—filter/highlight.

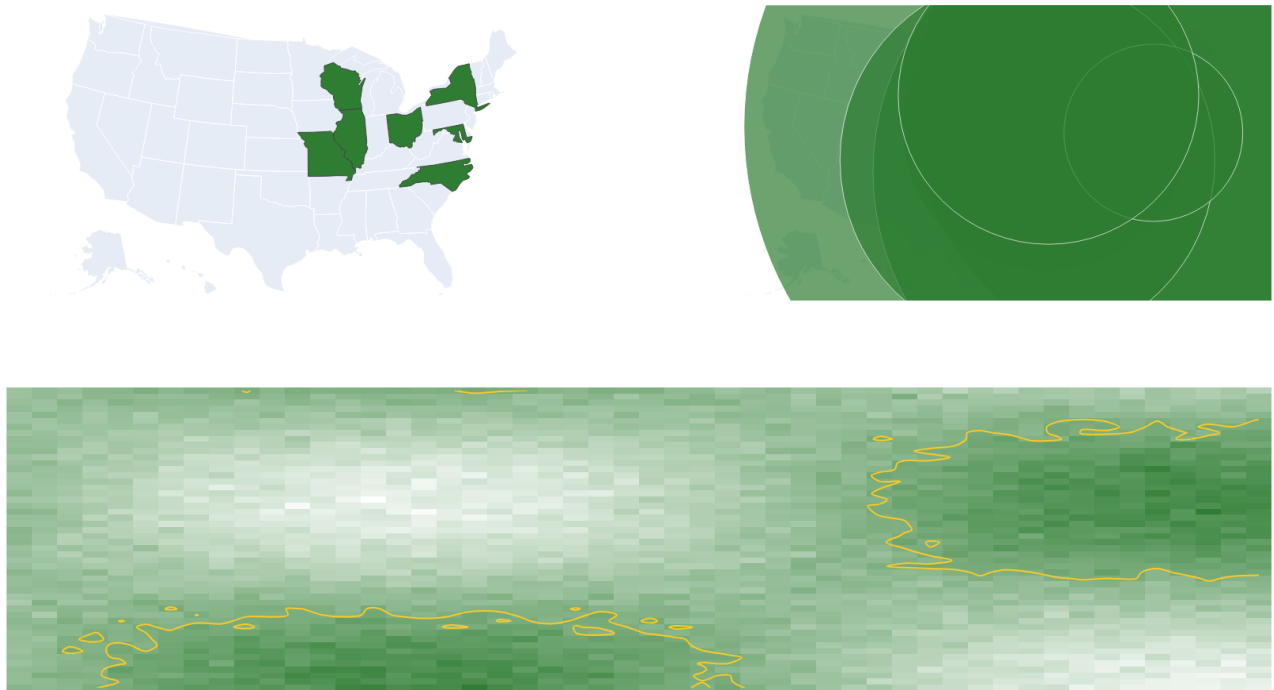

Relational Data - Important Focus

Notes:

This page spotlights important patterns only. Best: node-link + centrality, Sankey (%); Use: networks, flows, bottlenecks; Pitfalls: hairball—filter/highlight.

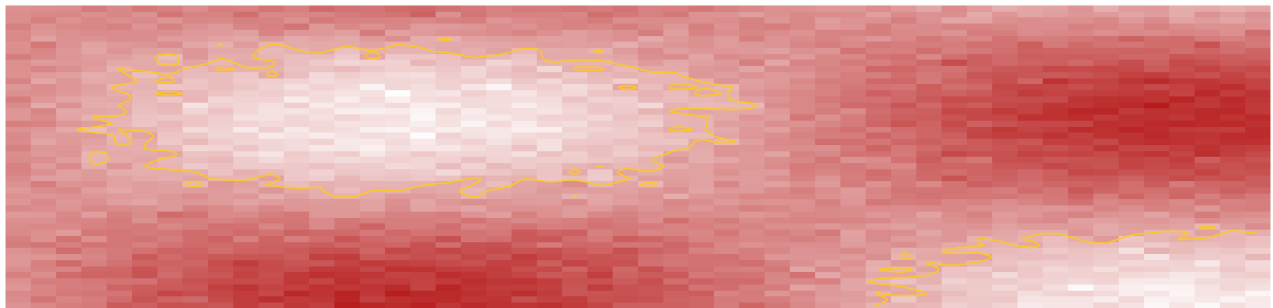

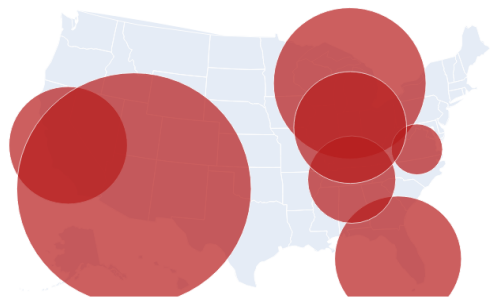

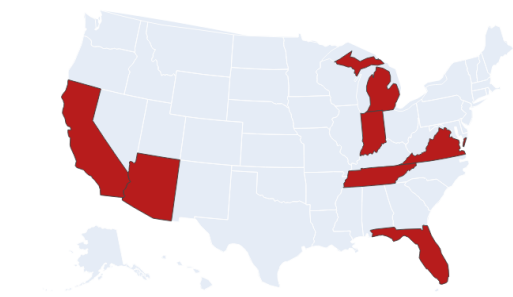

Spatial Data - Good Focus

Notes:

This page spotlights good patterns only. Best: rates per 100k choropleth, proportional symbols, heatmap; Use: geo comparisons, density; Pitfalls: projections, rainbow scales, no normalization.

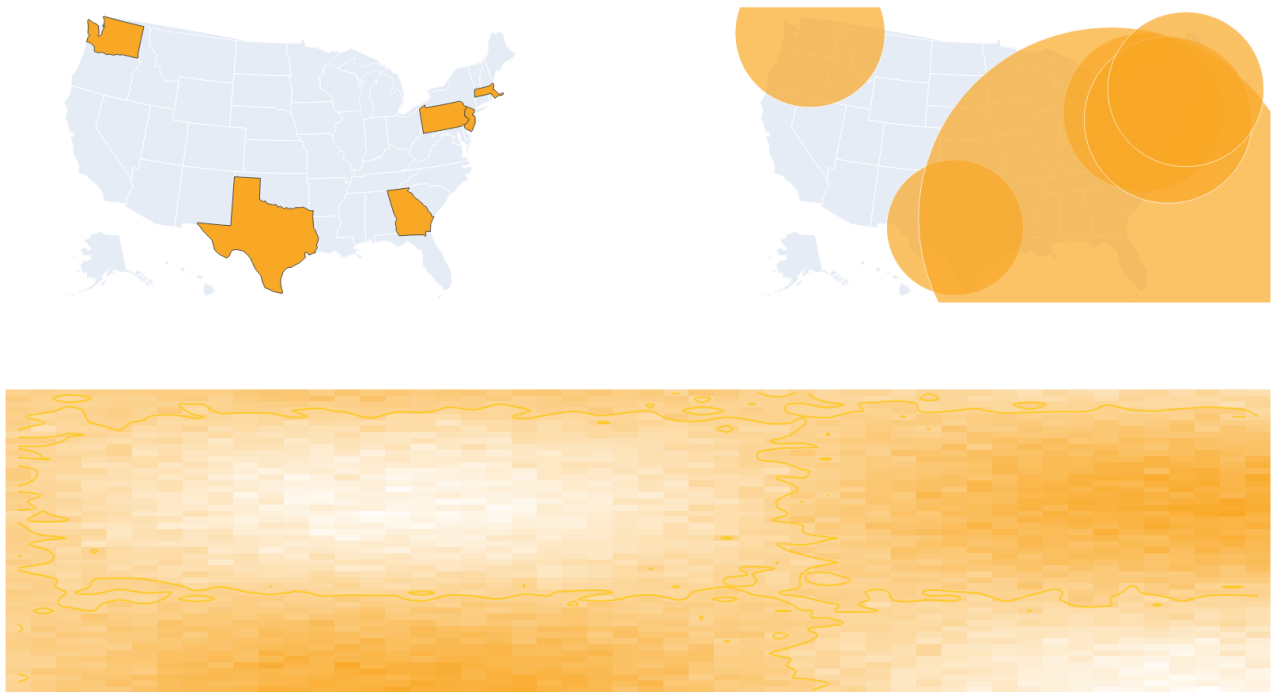

Spatial Data - Bad Focus

Notes:

This page spotlights bad patterns only. Best: rates per 100k choropleth, proportional symbols, heatmap; Use: geo comparisons, density; Pitfalls: projections, rainbow scales, no normalization.

Spatial Data - Important Focus

Notes:

This page spotlights important patterns only. Best: rates per 100k choropleth, proportional symbols, heatmap; Use: geo comparisons, density; Pitfalls: projections, rainbow scales, no normalization.
